Pedab Mail Protection

Always help with suspicious mails

Leaving users on their own is risky

- Most breaches are due to human error
- Email is part of nearly all cyber attacks
- Security traning can often be forgotten
- Many will rather click than ask for help

Still, people are your last line of defence. We turn them into security champions!

Try our premium user experience

- 95% of users say MailRisk is useful
- 50% of users onboarded on first day
- Reduced response time to seconds
- Recurring use increases over time

Your colleagues are going to love MailRisk!

SECURITY

Offer help with only one click

Users can always get help with suspicious emails. MailRisk taps into people's regular email workflow, and uniquely integrates security traning for impact learning.

Avoid manual email analysis

Combine human and artifical intelligence for unique automation. MailRisk becomes an extra member of your security team, offering analysis, feedback and data APIs.

Build positive security culture

Inspire your colleagues to help each other with suspicious emails. MailRisk uses gamification for enjoyable, measurable and scalable security awareness, all year round.

Get started in minutes

Check our our phising simulator and free posters. MailRisk is installed for everyone with only a few clicks, so that people are ready to be stopping scams in no time.
